

# 2019 CPAC Spring Meeting – 6 and 7 May

**Hardisty Conference Center  
Applied Physics Laboratory  
Seattle, WA**

**The CPAC meeting (Monday and Tuesday, 6 and 7 May 2019)** will include progress reports from CPAC funded research projects and research proposals for next year's funding. There will also be a session of new technology developments by selected outside speakers. Attending this meeting would also be an excellent opportunity to experience CPAC technology and innovation as well as assess how a relationship with CPAC can to add value to your organization. Valuable aspects of the CPAC meeting include formal and informal opportunities for networking, meeting CPAC graduate students, and getting to know the principal investigators and their research.

**We have scheduled an invited industry speaker** to present a case study on the value of multidisciplinary approaches to problem solving. Along with that, we will have 'lighting' presentations related to advances in the handling of multivariate data given by selected graduate students. This will give the graduate students a unique opportunity to meet industry leaders and to hear some of the inside details of identifying a problem that is data rich and needs analysis, the development of the chemometric model to address the problem, real-time adjustments during beta-testing, and the process analysis enhancement since implementation. This also answers a request from industry that it needs better trained students for the highly interdisciplinary data-driven work required to maintain their company's research leadership.

**Laboratory tours are also available during the meeting.** The meeting description and further information on the preliminary agenda and registration will be available soon on the CPAC website — [www.apl.uw.edu/cpac](http://www.apl.uw.edu/cpac). Please contact Mel Koch or Brian Marquardt with questions regarding the meeting.
